## Section A

## *This section consists of 20 MCQ'S questions of 1 mark each

1. If $\alpha$ and $\beta$ are the zeroes of the polynomial $x^{2}+2 x+1$, then $\frac{1}{\alpha}+\frac{1}{\beta}$ is equal to
a) -2
b) 2
c) 0
d) 1

Option (a) is Correct
Solution: Given polynomial is $x^{2}+2 x+1$

$$
\begin{gathered}
\alpha+\beta=-2, \alpha \beta=1 \\
\frac{1}{\alpha}+\frac{1}{\beta}=\frac{\alpha+\beta}{\alpha \beta}=\frac{-2}{1}=-2
\end{gathered}
$$

2. The roots of the quadratic equation $x^{2}-0.04=0$ are
a) $\pm 0.2$
b) $\pm 0.02$
c) 0.4
d) 2

Option (a) is Correct
Solution: Given equation is $x^{2}-0.04=0$

$$
x=\sqrt{0.04}= \pm 0.2
$$

3. In the given figure, PA is a tangent from an external point $P$ to a circle with centre 0 . If $\angle \mathrm{POB}=115^{\circ}$, then the value $\angle \mathrm{APO}$ is
a) $25^{\circ}$
b) $20^{\circ}$
c) $30^{\circ}$
d) $65^{0}$

Option (a) is Correct
Solution: $\angle \mathrm{POB}=115^{\circ}$

$$
\begin{aligned}
& \angle \mathrm{POA}=180^{\circ}-115^{0}=65^{\circ} \\
& \text { In } \triangle \mathrm{POA} \\
& \angle \mathrm{APO}+\angle \mathrm{POA}+\angle \mathrm{OAP}=180^{\circ} \\
& \angle \mathrm{APO}+65^{\circ}+90^{\circ}=180^{\circ} \\
& \angle \mathrm{APO}+155^{\circ}=180^{\circ} \\
& \angle \mathrm{APO}=180^{\circ}-155^{\circ}=25^{\circ}
\end{aligned}
$$

4. In an AP if $d=-4, n=7$ and $a_{n}=4$, then $a$ is equal to
a) 6
b) 7
c) 20
d) 28

Option (d) is Correct
Solution: Given $d=-4, n=7$ and $a_{n}=4$,

$$
\begin{aligned}
\mathrm{a}_{\mathrm{n}}=4 & \Rightarrow a+(\mathrm{n}-1) \mathrm{d}=4 \\
& \Rightarrow a+6 d=4 \Rightarrow a+6(-4)=4 \\
& \Rightarrow a-24=4 \\
\Rightarrow a & =4+24=28
\end{aligned}
$$

5. A bag contains 3 red and 2 blue marbles. if a marble is drawn at random, then the probability of drawing a blue marble is
a) $\frac{2}{5}$
b) $\frac{1}{4}$
c) $\frac{3}{5}$
d) $\frac{2}{3}$

Option (a) is Correct
Solution: No. of red marbles $=5$; No. of blue marbles $=2$
Total possible outcomes $=5$
Probability of drawing a blue marble is $=\frac{2}{5}$
6. 225 is can be expressed as
a) $5 \times 3^{2}$
b) $5^{2} \times 3$
c) $5^{2} \times 3^{2}$
d) $5^{3} \times 3$

Option (c) is Correct
Solution: $225=3 \times 3 \times 5 \times 5$

$$
=5^{2} \times 3^{2}
$$

| 3 | 225 |
| :---: | :---: |
| 3 | 75 |
| 5 | 25 |
| 5 | 5 |

7. In given figure $\mathrm{DE} \| \mathrm{BC}$. Find the length of side AD , given that $\mathrm{AE}=1.8 \mathrm{~cm}, \mathrm{BD}=7.2 \mathrm{~cm}$ and $\mathrm{CE}=5.4 \mathrm{~cm}$.
a) 2.4 cm
b) 2.2 cm
c) 3.2 cm
d) 3.4 cm

Option (a) is Correct
Solution: In $\triangle$ ABC, DE || BC
By basic proportionality theorem

$$
\begin{aligned}
& \frac{\mathrm{AD}}{\mathrm{DB}}=\frac{\mathrm{AE}}{\mathrm{EC}} \\
& \frac{\mathrm{AD}}{7.2}=\frac{1.8}{5.4}=\frac{18}{54}=\frac{1}{3} \\
& \frac{\mathrm{AD}}{7.2}=\frac{1}{3}
\end{aligned}
$$

$\mathrm{AD}=2.4 \mathrm{~cm}$
8. Consider the following distribution:

| Marks obtained | Number of students |
| :--- | :---: |
| More than or equal to 0 | 63 |
| More than or equal to 10 | 58 |
| More than or equal to 20 | 55 |
| More than or equal to 30 | 51 |
| More than or equal to 40 | 48 |
| More than or equal to 50 | 42 |

The frequency of class $30-40$ is:
a) 3
b) 4
c) 48
d) 51

Option (a) is Correct

## Solution:

| Marks obtained | Number of students | Frequency |
| :---: | :---: | :---: |
| $0-10$ | 63 | 5 |
| $10-20$ | 58 | 3 |
| $20-30$ | 55 | 4 |
| $30-40$ | 51 | 3 |
| $40-50$ | 48 | 6 |
| $50-60$ | 42 | 42 |

9. If $\cos 9 \alpha=\sin \alpha$ and $9 \alpha<90^{\circ}$, then the value of $\tan 5 \alpha$ is
a) $\frac{1}{\sqrt{3}}$
b) $\sqrt{3}$
c) 1
d) 0

Option (c) is Correct
Solution: Given $\cos 9 \alpha=\sin \alpha$ and $9 \alpha<90^{\circ}$

$$
\begin{aligned}
& \cos 9 \alpha=\cos (90-\alpha) \\
& 9 \alpha=90-\alpha \\
& 10 \alpha=90 \\
& \alpha=9 \\
& \tan 5 \alpha=\tan (5 \times 9)=\tan 45=1
\end{aligned}
$$

10. From the top of a 7 m high building the angle of elevation of the top of a cable tower is $60^{\circ}$ and the angle of depression of its foot is $45^{\circ}$, then the height of the tower is
a) 14.124 m
b) 17.124 m
c) 19.124 m
d) 1.124 m

Option (c) is Correct
Solution: In $\triangle \mathrm{EDC}, \tan 45^{\circ}=\frac{\mathrm{ED}}{\mathrm{DC}}$

$$
\begin{aligned}
& 1=\frac{7}{\mathrm{DC}} \\
& \mathrm{DC}=7 \mathrm{~m} \\
& \Rightarrow \mathrm{DC}=\mathrm{EB}=7 \mathrm{~m}
\end{aligned}
$$

In $\triangle \mathrm{ABE}, \tan 60^{\circ}=\frac{\mathrm{AB}}{\mathrm{BE}}$

$$
\begin{aligned}
& \sqrt{3}=\frac{x}{7} \\
& \mathrm{x}=7 \sqrt{3} \mathrm{~m} \\
& \Rightarrow \mathrm{DC}=\mathrm{EB}=7 \mathrm{~m}
\end{aligned}
$$

the height of the tower $=A B+B C=7 \mathrm{~m}+7 \sqrt{3} \mathrm{~m}$

$$
\begin{aligned}
& =7(1+\sqrt{3}) \mathrm{m} \\
& =7(2.732) \mathrm{m} \\
& =19.124 \mathrm{~m}
\end{aligned}
$$

11. A circus artist is climbing a 20 m long rope, which is tightly stretched and tied from the top of a vertical pole to the ground. If the angle made by the rope with the ground level is $30^{\circ}$, then what is the height of the pole?
a) 20 m
b) 8 m
c) 10 m
d) 6 m

Option (c) is Correct
Solution: In $\triangle \mathrm{ABC}, \sin 30^{\circ}=\frac{\mathrm{AB}}{\mathrm{AC}}$

$$
\begin{aligned}
& \frac{1}{2}=\frac{x}{20} \\
& x=10 \mathrm{~m}
\end{aligned}
$$

12. The maximum number of zeroes a cubic polynomial can have is
a) 1
b) 4
c) 2
d) 3

Option (d) is Correct
Solution: In a cubic polynomial number of zeros $=3$
Why because degree of the polynomial $=3$.
13. If triangle $A B C$ is similar to triangle $D E F$ such that $2 A B=D E$ and $B C=8 \mathrm{~cm}$, then find EF.
a) 16 cm
b) 14 cm
c) 12 cm
d) 15 cm

Option (a) is Correct
Solution: Given $\triangle \mathrm{ABC} \sim \Delta \mathrm{DEF} 2 \mathrm{AB}=\mathrm{DE}$ and $\mathrm{BC}=8 \mathrm{~cm}$
$2 \mathrm{AB}=\mathrm{DE} \Rightarrow \frac{\mathrm{AB}}{\mathrm{DE}}=\frac{1}{2}$
Since, $\triangle \mathrm{ABC} \sim \triangle \mathrm{DEF}$

$$
\begin{aligned}
& \frac{\mathrm{AB}}{\mathrm{DE}}=\frac{\mathrm{BC}}{\mathrm{EF}}=\frac{\mathrm{AC}}{\mathrm{DF}} \\
& \frac{1}{2}=\frac{8}{\mathrm{EF}} \Rightarrow \mathrm{EF}=16
\end{aligned}
$$

14. A sphere is melted and half of the molten liquid is used to form 11 identical cubes, whereas the remaining half is used to form 7 identical smaller spheres. The ratio of the side of the cube to the radius of the new small sphere is
a) $\left(\frac{4}{3}\right)^{1 / 3}$
b) $\left(\frac{8}{3}\right)^{1 / 3}$
c) $(3)^{1 / 3}$
d) 2

Option (b) is Correct

## Solution:

$$
\text { Volume of } 11 \text { small cubes }=\text { Volume of } 7 \text { small spheres }
$$

$$
\begin{aligned}
& 11 \mathrm{a}^{3}=7\left(\frac{4}{3} \pi \mathrm{r}^{3}\right) \\
& 11 \mathrm{a}^{3}=7 \times \frac{4}{3} \times \frac{22}{7} \mathrm{r}^{3} \\
& \mathrm{a}^{3}=\frac{8}{3} \mathrm{r}^{3} \\
& \frac{\mathrm{a}^{3}}{\mathrm{r}^{3}}=\frac{8}{3} \Rightarrow \frac{\mathrm{a}}{\mathrm{r}}=\left(\frac{8}{3}\right)^{1 / 3}
\end{aligned}
$$

15. Ratio of volumes of two cones with same radii is
a) $h_{1}: h_{2}$
b) $r_{1}: r_{2}$
c) $\mathrm{s}_{1}: \mathrm{s}_{2}$
d) $l_{1}: l_{2}$

Option (a) is Correct

## Solution:

$$
\frac{1}{3} \pi r^{2} h_{1}: \frac{1}{3} \pi r^{2} h_{2}=h_{1}: h_{2}
$$

16. In the formula $a+h\left(\frac{\sum f_{i} \mu_{i}}{\sum f_{\mathrm{i}}}\right)$, for finding the mean of un grouped frequency distribution, $\mu_{\mathrm{i}}$ is equal to
a) $\frac{x_{i}+a}{h}$
b) $h\left(x_{i}-a\right)$
c) $\frac{x_{i}-a}{h}$
d) $\frac{a-x_{i}}{h}$

Option (c) is Correct
17. If the probability of an event is $p$, then the probability of its complementary event will be
a) $p-1$
b) $p$
c) $1-\mathrm{p}$
d) $1-\frac{1}{\mathrm{p}}$
Option (c) is Correct
18. The distance of the point $P(-3,-4)$ from the $X$ - axis is
a) 3
b) -3
c) 4
d) -4

Option (c) is Correct
Solution:

19. Assertion (A): Pair of linear equations $9 x+3 y+12=0,8 x+6 y+24=0$ have infinitely many solutions.
Reason (R): Pair of linear equations $a_{1} x+b_{1} y+c_{1}=0, a_{2} x+b_{2} y+c_{2}=0$ have infinitely many solutions. If $\frac{a_{1}}{a_{2}}=\frac{b_{1}}{b_{2}}=\frac{c_{1}}{c_{2}}$
a) both A and R are true and R is the correct explanation of A
b) both $A$ and $R$ are true and $R$ is the not correct explanation of $A$
c) A is true, $R$ is false
d) A is false, $R$ is true

Option (d) is Correct

## Solution:

Given equations are $9 x+3 y+12=0,8 x+6 y+24=0$

$$
\begin{gathered}
\frac{\mathrm{a}_{1}}{\mathrm{a}_{2}}=\frac{9}{8} ; \frac{\mathrm{b}_{1}}{\mathrm{~b}_{2}}=\frac{3}{6}=\frac{1}{2} ; \frac{\mathrm{c}_{1}}{\mathrm{c}_{2}}=\frac{12}{24}=\frac{1}{2} \\
\frac{\mathrm{a}_{1}}{\mathrm{a}_{2}} \neq \frac{\mathrm{b}_{1}}{\mathrm{~b}_{2}}
\end{gathered}
$$

Pair of linear equations $9 x+3 y+12=0,8 x+6 y+24=0$ have finite solutions
20. Assertion (A): If the circumference of a circle is 176 cm , then its radius is 28 cm . Reason (R): Circumference of circle is $2 \pi \times$ radius.
a) both $A$ and $R$ are true and $R$ is the correct explanation of $A$
b) both $A$ and $R$ are true and $R$ is the not correct explanation of $A$
c) A is true but $R$ is false
d) $A$ is false but $R$ is true

Option (a) is Correct
Solution:
Given the circumference of a circle is 176 cm

$$
\begin{aligned}
2 \pi \mathrm{r}=176 & \Rightarrow 2 \times \frac{22}{7} \times \mathrm{r}=176 \\
& \Rightarrow \mathrm{r}=28 \mathrm{~cm}
\end{aligned}
$$

## Section B

* This section consists of 5 questions of 2 marks each.

21. In the given figure, if $A B C D$ is trapezium in which $A B\|C D\| E F$, then prove that $\frac{A E}{E D}=\frac{B F}{F C}$.

## Solution:

Given, $A B C D$ is trapezium in which $A B\|C D\| E F$
Join AC
In $\triangle \mathrm{ABC}, \mathrm{GF} \| \mathrm{AB}$
By Basic Proportionality Theorem
$\frac{\mathrm{CF}}{\mathrm{FB}}=\frac{\mathrm{CG}}{\mathrm{GA}}$
$\frac{\mathrm{BF}}{\mathrm{FC}}=\frac{\mathrm{GA}}{\mathrm{CG}}$ (Invertedo)
In $\triangle \mathrm{ADC}, \mathrm{EG} \| \mathrm{DC}$

By Basic Proportionality Theorem
$\frac{\mathrm{AE}}{\mathrm{ED}}=\frac{\mathrm{GA}}{\mathrm{CG}}$ (Invertedo) $\qquad$
From (1) and (2)
$\frac{\mathrm{AE}}{\mathrm{ED}}=\frac{\mathrm{BF}}{\mathrm{FC}}$
Hence proved
22. In the given figure, from a point $P$, two tangents PT and. PS are drawn to a circle with centre 0 such that $\angle \mathrm{SPT}=120^{\circ}$ Prove that $\mathrm{OP}=2 \mathrm{PS}$.

## Solution:

It is given that PS and PT are tangents to the circle with centre 0 .
Also, $\angle \mathrm{SPT}=120^{\circ}$.
To prove: $\mathrm{OP}=2 \mathrm{PS}$
Proof:

In $\triangle \mathrm{PTO}$ and $\triangle \mathrm{PSO}$,
$\mathrm{PT}=\mathrm{PS} \quad$ (Tangents drawn from an external point to a circle are equal in length.)
$\mathrm{TO}=\mathrm{SO} \quad$ (Radii of the circle)
$\angle \mathrm{PTO}=\angle \mathrm{PSO}=90^{\circ}$
$\therefore \triangle \mathrm{PTO} \cong \triangle \mathrm{PSO} \quad$ (By SAS congruency)
Thus, $\angle \mathrm{TPO}=\angle \mathrm{SPO}=\frac{120^{\circ}}{2}=60^{\circ}$
Now, In $\triangle$ PSO,
$\cos 60^{\circ}=\frac{\mathrm{PS}}{\mathrm{OP}}$
$\frac{1}{2}=\frac{\mathrm{PS}}{\mathrm{OP}}$
$\Rightarrow \mathrm{OP}=2 \mathrm{PS}$
Hence proved
23. If $\sqrt{3} \sin \theta-\cos \theta=0$ where $0<\theta<90 \circ$, then find the value of $\theta$.

## Solution:

Given, $\sqrt{3} \sin \theta-\cos \theta=0$ where $0<\theta<90$ 。
$\sqrt{3} \sin \theta=\cos \theta$
$\frac{\sin \theta}{\cos \theta}=\frac{1}{\sqrt{3}}$
$\tan \theta=\frac{1}{\sqrt{3}}$
$\tan \theta=\tan 30^{\circ}$
$\therefore \theta=30^{\circ}$
24. A box contains cards numbered 11 to 123 . a card is drawn at random from the box find the probability that the number on the card is
(i) A perfect square number
(ii) Multiple of 7

## Solution:

Total cards numbered from 11 to $123=113$
(i) Square numbers from 11 to $123=16,25,36,49,64,81,100$ and 121

Total square number from 11 to $123=8$
$P($ a perfect square number $)=\frac{8}{113}$
(ii) Multiples of 7 from 11 to 123

$$
=14,21,28,35,42,49,56,63,70,77,84,91,98,105,112,119
$$

Total multiples of 7 from 11 to $123=16$
$\mathrm{P}($ a multiple of 7$)=\frac{16}{113}$

If a letter of English alphabet is chosen at random, find the probability that the letter so consonant is: (i) a vowels (ii) a consonants

Solution: Total letters English alphabet $=26$
(i) no of vowels $=5$

$$
P(\text { vowel })=\frac{5}{26}
$$

(ii) no of consonants $=21$
$\mathrm{P}($ consonant $)=\frac{21}{26}$
25. In Figure, $\angle \mathrm{D}=\angle \mathrm{E}$ and $\frac{A D}{D B}=\frac{A E}{E C}$. Prove that $\triangle \mathrm{BAC}$ is an isosceles triangle.

Solution: Given $\frac{A D}{D B}=\frac{A E}{E C}$
Therefore, DE || BC ( $\because$ Converse of Basic Proportionality Theorem)
So, $\angle D=\angle B$
$\angle \mathrm{E}=\angle \mathrm{C}$ (Corresponding angles)
But $\angle \mathrm{D}=\angle \mathrm{E}$ (Given)
$\therefore \angle \mathrm{B}=\angle \mathrm{C}$ [From (1)]
$\mathrm{AB}=\mathrm{AC}(\because$ Sides opposite to equal angles)
$B A C$ is an isosceles triangle.
(OR)
$A B C$ is a right triangle right angled at $C$. Let $B C=a, C A=b, A B=c$ and let $p$ be the length of perpendicular from $C$ on $A B$ prove that $p c=a b$.

Solution: Given ABC is a right triangle right angled at C . Let $\mathrm{BC}=\mathrm{a}, \mathrm{CA}=\mathrm{b}, \mathrm{AB}=\mathrm{c}$ and Let $p$ be the length of perpendicular from $C$ on $A B$ In $\triangle A C B, B C$ is base and $A C$ is height

$$
\begin{align*}
& \operatorname{Ar}(\triangle \mathrm{ACB})=\frac{1}{2} \mathrm{BC} \times \mathrm{AC} \\
& \operatorname{Ar}(\triangle \mathrm{ACB})=\frac{1}{2} \mathrm{a} \times \mathrm{c} \ldots- \tag{1}
\end{align*}
$$

Also, in $\triangle A C B, A B$ is base and $C D$ is height

$\operatorname{Ar}(\triangle \mathrm{ACB})=\frac{1}{2} \mathrm{AB} \times \mathrm{CD}$
$\operatorname{Ar}(\triangle \mathrm{ACB})=\frac{1}{2} \mathrm{c} \times \mathrm{p}$
From (1) and (2)

$$
\mathrm{pc}=\mathrm{ab} .
$$

## Section

## * This section consists of 6 questions of 3 marks each.

26. Quadratic polynomial $2 x^{2}-3 x+1$ has zeroes as $\alpha$ and $\beta$. Now form a quadratic polynomial whose zeroes are $3 \alpha$ and $3 \beta$.

## Solution:

Given Polynomial is $2 x^{2}-3 x+1$

$$
\alpha+\beta=\frac{3}{2} ; \alpha \beta=\frac{1}{2}
$$

Quadratic polynomial whose zeroes $3 \alpha, 3 \beta$ is

$$
\begin{aligned}
& \mathrm{k}\left[\mathrm{x}^{2}-(3 \alpha+3 \beta)+(3 \alpha)(3 \beta)\right] \\
& \mathrm{k}\left[\mathrm{x}^{2}-3(\alpha+\beta)+9 \alpha \beta\right. \\
& \mathrm{k}\left[\mathrm{x}^{2}-3\left(\frac{3}{2}\right)+9\left(\frac{1}{2}\right)\right] \\
& \mathrm{k}\left[\mathrm{x}^{2}-\frac{9}{2} \mathrm{x}+\frac{9}{2}\right]
\end{aligned}
$$

when $\mathrm{k}=2$
Quadratic polynomial is $2 x^{2}-9 x+9$
27. Find whether the following pair of linear equations has a unique solution. If yes, find the solution. $7 x-4 y=49$ and $5 x-6 y=57$

## Solution:

$$
\begin{aligned}
& \text { Given equations are } 7 x-4 y=49 \\
& \qquad \begin{array}{l}
5 x-6 y=57 \\
a_{1}=7 ; b_{1}=-4 ; c_{1}=49 \\
a_{2}=5 ; b_{2}=-6 ; c_{2}=57 \\
\frac{a_{1}}{a_{2}}=\frac{7}{5} ; \frac{b_{1}}{b_{2}}=\frac{-4}{-6}=\frac{2}{3} ; \frac{c_{1}}{c_{2}}=\frac{49}{57} \\
\quad \frac{a_{1}}{a_{2}} \neq \frac{b_{1}}{b_{2}}
\end{array}
\end{aligned}
$$

Given equations has a unique solution
5 equation (1) - 7 equation (2)

$$
\begin{gathered}
35 x-25 y=245 \\
35 x-42 y=399 \\
\hline 22 y=-154 \\
y=-7
\end{gathered}
$$

Substitute y value in equation (1)

$$
\begin{aligned}
& 7 x-4(-7)=49 \\
& 7 x+28=49 \\
& 7 x=49-28=21 \\
& x=3
\end{aligned}
$$

$\therefore$ Solution of given equations is $\mathrm{x}=3$ and $\mathrm{y}=\mathrm{y}=-7$
28. In given figure $\triangle \mathrm{ABC} \sim \triangle \mathrm{DEF}$. AP bisects $\angle \mathrm{CAB}$ and DQ bisects $\angle F D E$.

Prove that (i) $\frac{A P}{D Q}=\frac{A B}{D E}$
(ii) $\Delta \mathrm{CAP} \sim \Delta \mathrm{FDQ}$

## Solution:

Given, $\triangle \mathrm{ABC} \sim \triangle \mathrm{DEF}$
AP bisects $\angle \mathrm{CAB}$ and DQ bisects $\angle \mathrm{FDE}$

$\Rightarrow \angle \mathrm{CAP}=\angle \mathrm{BAP}$ and $\angle \mathrm{FDQ}=\angle \mathrm{EDQ}$
(i) In $\triangle \mathrm{ABP}$ and $\triangle \mathrm{DEQ}$

$$
\begin{aligned}
& \angle B=\angle E \quad(\because \triangle A B C \sim \Delta D E F) \\
& \angle B A P=\angle E D Q \quad[\because \angle A=\angle D ; 1 / 2(\because \angle A)=1 / 2(\angle D)]
\end{aligned}
$$

By A. A similarity

$$
\begin{aligned}
& \triangle \mathrm{ABP} \sim \Delta \mathrm{DEQ} \\
& \Rightarrow \frac{\mathrm{AP}}{\mathrm{DQ}}=\frac{\mathrm{AB}}{\mathrm{DE}} \quad(\because \text { corresponding sides in proportion })
\end{aligned}
$$

(ii) In $\triangle \mathrm{CAP}$ and $\triangle \mathrm{FDQ}$
$\angle \mathrm{C}=\angle \mathrm{F}(\because \triangle \mathrm{ABC} \sim \triangle \mathrm{DEF})$
$\angle \mathrm{CAP}=\angle \mathrm{FDQ}[\because \angle \mathrm{A}=\angle \mathrm{D} ; 1 / 2(\because \angle \mathrm{~A})=1 / 2(\angle \mathrm{D})]$
By A. A similarity
$\Delta \mathrm{CAP} \sim \Delta \mathrm{FDQ}$
(OR)
In the following figure $\mathrm{DE} \| \mathrm{AC}$ and $\mathrm{DF} \| \mathrm{AE}$, then prove that $\frac{\mathrm{BE}}{\mathrm{FE}}=\frac{\mathrm{BE}}{\mathrm{EC}}$.

## Solution:

Given, $\mathrm{DE} \| \mathrm{AC}$ and $\mathrm{DF} \| \mathrm{AE} \triangle \mathrm{ABC} \sim \Delta \mathrm{DEF}$
In $\triangle A B C, D E \| A C$
$\Rightarrow \frac{\mathrm{BD}}{\mathrm{DA}}=\frac{\mathrm{BE}}{\mathrm{EC}}$
( $\because$ by basic proportionality theorem)

$$
\text { In } \triangle \mathrm{ABE}, \mathrm{DF} \| \mathrm{AE}
$$

$\Rightarrow \frac{\mathrm{BD}}{\mathrm{DA}}=\frac{\mathrm{BF}}{\mathrm{FE}}$
( $\because$ by basic proportionality theorem)
From (i) and (ii)
$\frac{\mathrm{BE}}{\mathrm{FE}}=\frac{\mathrm{BE}}{\mathrm{EC}}$
29. If $\cos (40+x)=\sin 30$, find the value of $x$

## Solution:

$$
\begin{aligned}
& \text { Given, } \cos (40+x)=\sin 30 \\
& \begin{array}{c}
\cos (40+x)=\cos (90-30) \\
40+x=60 \\
x=60-40=20
\end{array}
\end{aligned}
$$

30. A conical vessel, with base radius 5 cm and height 24 cm , is full of water. This water is emptied into a cylindrical vessel of base radius 10 cm . Find the height to which the water will rise in the cylindrical vessel. (Use $\pi=22 / 7$ )

## Solution:

Given, Radius of a Cone $=\mathrm{r}=5 \mathrm{~cm}$
Height of the Cone $=\mathrm{h}=24 \mathrm{~cm}$
Radius of the cylinder $=\mathrm{R}=10 \mathrm{~cm}$
Height of the cylinder $=\mathrm{H}=$ ?
Volume of water in conical vessel = Volume in cylindrical vessel
$\Rightarrow \frac{1}{3} \pi r^{2} h=\frac{1}{3} \pi R^{2} H$
$\Rightarrow \frac{1}{3} \pi(5)^{2} \times 24=\pi(10)^{2} \times \mathrm{H}$
$\Rightarrow 200=100 \times \mathrm{H}$
$\therefore \mathrm{H}=2 \mathrm{~cm}$

504 cones, each of diameter 3.5 cm and height 3 cm , are melted and recast into a metallic sphere. Find the diameter of the sphere.

## Solution:

Given, diameter of each cone $=3.5 \mathrm{~cm}$

$$
\Rightarrow \mathrm{r}=\frac{3.5}{2} \mathrm{~cm}
$$

Height of the cone $=\mathrm{h}=3 \mathrm{~cm}$
Volume of cone $=\frac{1}{3} \pi \mathrm{r}^{2} \mathrm{~h}$
$=\frac{1}{3} \pi\left(\frac{3.5}{2}\right)^{2} \times 3$
$=\frac{1}{3} \times \frac{22}{7} \times \frac{3.5}{2} \times \frac{3.5}{2} \times 3$
$=\frac{19.25}{2}$
Volume of 504 cones $=504 \times \frac{19.25}{2}=4851 \mathrm{~cm}^{3}$
504 cones are melted to form a sphere.
Volume of 504 cones $=$ volume of sphere
$\Rightarrow$ Volume of sphere $=4851 \mathrm{~cm}^{3}$
$\frac{4}{3} \pi r^{3}=4851$
$\frac{4}{3} \times \frac{22}{7} \times \mathrm{r}^{3}=4851$
$r^{3}=\frac{4851 \times 3 \times 7}{4 \times 22}$
$r^{3}=(10.5)^{3}$
$\mathrm{r}=10.5$
Thus, the diameter of sphere $=2 \times 10.5 \mathrm{~cm}=21 \mathrm{~cm}$
31. Three bells toll together at intervals of 9, 12 and 15 minutes respectively. If they start tolling together, after what time will they toll next?

## Solution:

Given, three bells toll together at intervals of 9,12 and 15 minutes respectively
Tolling together for next time means
tolling after the least possible minutes which is the LCM of 9,12 and 15

$$
\text { LCM of } 9,12 \text { and } 15=3 \times 3 \times 5 \times 2 \times 2
$$

$$
=180
$$

$\therefore$ Time after which the three bells will toll together next $=180$ minutes
$\therefore 180$ minutes $=180 / 60=3$ hours

## Section D

## *This section consists of 4 questions of 5 marks each

32. Solve forx: $\frac{1}{x-2}+\frac{2}{x-1}=\frac{6}{x}, x \neq 0,1,2$

## Solution:

Given $\frac{1}{(x-2)}+\frac{2}{(x-1)} x=\frac{6}{x}$

$$
\begin{align*}
& =\frac{x-1+2 x-4}{(x-2)(x-1)}=\frac{6}{x} \\
& =x(3 x-5)=6(x-2)(x-1)=6\left(x^{2}-x-2 x+2\right) \\
& =3 x^{2}-5 x=6 x^{2}-18 x+12 \\
& =3 x^{2}-5 x=6 x^{2}+-12=0 \\
& =13 x-3 x^{2}+12=0 \\
& =3 x^{2}-13 x+12=0 \\
& =3 x^{2}-4 x-9 x+12=0 \\
& =x(3 x-4)-3(3 x-4)=0 \\
& =(3 x-4)(x-3)=0 \\
& x=3 \text { or } x=\frac{4}{3} \tag{OR}
\end{align*}
$$

find the values of $k$ for which the quadratic equation $(3 k+1) x^{2}+2(k+1) x+1=0$ has equal roots. Also, find the roots.

## Solution:

Given $y=(3 k+1) x^{2}+2(k+1) x+1=0$
Then $\mathrm{D}=0 \Rightarrow \mathrm{~b}^{2}-4 \mathrm{ac}=0$
$\mathrm{a}=3 \mathrm{k}+1 \mathrm{~b}=2(\mathrm{k}+1) \mathrm{c}=1$
$\mathrm{b}^{2}-4 \mathrm{ac}=[2(\mathrm{k}+1)]^{2}-4(3 \mathrm{k}+1)=0$
$\Rightarrow 4 \mathrm{k}^{2}+4+8 \mathrm{k}-12 \mathrm{k}-4=0$
$\Rightarrow 4 \mathrm{k}^{2}-4 \mathrm{k}=0$
$\Rightarrow 4 \mathrm{k}(\mathrm{k}-1)=0$
$\Rightarrow \mathrm{k}=0 \mathrm{k}=1$
When $\mathrm{k}=0$
equation $y=x^{2}+2 x+1=0$
Roots are $x=-1,-1$
When $\mathrm{k}=1$
equation $4 x^{2}+4 x+1=0$
Roots are $\mathrm{x}=\frac{-1}{2}, \frac{-1}{2}$
33. 0 is the centre of a circle of radius 5 cm . T is a point such that $\mathrm{OT}=13 \mathrm{~cm}$ and OT intersects the circle at E . If AB is the tangent to the circle at E , find length of AB .

## Solution:

Clearly $\angle O P T=90^{\circ}$
Applying Pythagoras in $\triangle$ OPT, we have $\mathrm{OT}^{2}=\mathrm{OP}^{2}+\mathrm{PT}^{2}$
$\Rightarrow 13^{2}=5^{2}+\mathrm{PT}^{2}$
$\Rightarrow \mathrm{PT}^{2}=169-25=144$

$\Rightarrow \mathrm{PT}=12 \mathrm{~cm}$
Since lengths of tangents drawn from a point to a circle are equal.
Therefore, $\mathrm{AP}=\mathrm{AE}=\mathrm{x}$ (say)
$\Rightarrow \mathrm{AT}=\mathrm{PT}-\mathrm{AP}=(12-\mathrm{x}) \mathrm{cm}$

Since, $A B$ is the tangent to the circle $E$.
Therefore, $O E \perp A B$
$\Rightarrow \angle O E A=90^{\circ}$
$\Rightarrow \angle \mathrm{AET}=90^{\circ}$
$\Rightarrow \mathrm{AT}^{2}=\mathrm{AE}^{2}+\mathrm{ET}^{2}$ [Applying pythagoras theorem in $\triangle \mathrm{AET}$ ]
$(12-x)^{2}=x^{2}+(13-5)^{2}$
$\Rightarrow 144-24 \mathrm{x}+\mathrm{x}^{2}=\mathrm{x}^{2}+64$
$\Rightarrow 24 \mathrm{x}=80$
$\Rightarrow \mathrm{x}=\frac{10}{3} \mathrm{~cm}$
Similarly, $B E=\frac{10}{3} \mathrm{~cm}$
$\therefore \mathrm{AB}=\mathrm{AE}+\mathrm{BE}=\left(\frac{10}{3}+\frac{10}{3}\right) \mathrm{cm}$

$$
=\frac{20}{3} \mathrm{~cm}
$$

34. Find the mode of the following frequency distribution

| Class Interval | $25-30$ | $30-35$ | $35-40$ | $40-45$ | $45-50$ | $50-55$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Frequency | 25 | 34 | 50 | 42 | 38 | 14 |

## Solution:

$35-40$ is model class (highest frequency)
$\mathrm{l}=$ lower limit $=35$
$\mathrm{h}=$ height (class width) $=5$
$\mathrm{f}_{0}=$ Frequency of preceding class $=34$
$\mathrm{f}_{1}=$ Frequency of modal class $=50$
$\mathrm{f}_{2}=$ Frequency of succeeding class $=42$
Mode $=1+\frac{f_{1}-f_{0}}{2 f_{1}-f_{0}-f_{2}} \times h$

$$
\begin{aligned}
=35+ & \frac{50-34}{2(50)-34-42} \times 5 \\
& =35+\frac{16}{100-76} \times 5 \\
& =35+\frac{16}{24} \times 5 \\
& =35+\frac{80}{24} \\
& =35+3.33
\end{aligned}
$$

$\therefore$ Mode is 38.33

## (OR)

On the sports day of a school, 300 students participated. Their ages are given in the following distribution.

| Age (in years) | $5-7$ | $7-9$ | $9-11$ | $11-13$ | $13-15$ | $15-17$ | $17-19$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Number of students | 67 | 33 | 41 | 95 | 36 | 13 | 15 |

Find the mean and mode of the date.

## Solution:

| C.I | $\mathrm{f}_{\mathrm{i}}$ | $\mathrm{x}_{\mathrm{i}}$ | $\mathrm{f}_{\mathrm{i}} \mathrm{x}_{\mathrm{i}}$ |
| :---: | :---: | :---: | :---: |
| $5-7$ | 67 | 6 | 402 |
| $7-9$ | 33 | 8 | 264 |
| $9-11$ | 41 | 10 | 410 |
| $11-13$ | 95 | 12 | 1140 |
| $13-15$ | 36 | 14 | 504 |
| $15-17$ | 13 | 16 | 208 |
| $17-19$ | 15 | 18 | 270 |
|  | $\sum \mathrm{f}_{\mathrm{i}}=300$ |  | $\sum \mathrm{f}_{\mathrm{i}} \mathrm{x}_{\mathrm{i}}=3198$ |

$$
\begin{aligned}
\text { Mean } & =\frac{\sum \mathrm{f}_{\mathrm{i}} \mathrm{x}_{\mathrm{i}}}{\sum \mathrm{f}_{\mathrm{i}}} \\
& =\frac{3198}{300} \\
& =10.66
\end{aligned}
$$

$11-13$ is model class (highest frequency)
$\mathrm{l}=$ lower limit $=11$
$\mathrm{h}=$ height (class width) $=2$
$\mathrm{f}_{0}=$ Frequency of preceding class $=41$
$\mathrm{f}_{1}=$ Frequency of modal class $=95$
$\mathrm{f}_{2}=$ Frequency of succeeding class $=36$

$$
\begin{aligned}
& \text { Mode }=\mathrm{l}+\frac{\mathrm{f}_{1}-\mathrm{f}_{0}}{2 \mathrm{f}_{1}-\mathrm{f}_{0}-\mathrm{f}_{2}} \times \mathrm{h} \\
& =11+\frac{95-41}{2(95)-41-36} \times 2 \\
& =11+\frac{54}{190-77} \times 2 \\
& =11+\frac{54}{113} \times 2 \\
& =11+\frac{108}{113} \\
& =11+0.95
\end{aligned}
$$

$\therefore$ Mode is 11.95
35. Find the ratio in which the line $x-3 y=0$ divides the line segment joining the points $(-2,-5)$ and $(6,3)$. Find the coordinates of the point of intersection.

## Solution:

 P in the ratio $\mathrm{k}: 1$.

$$
\begin{aligned}
& \mathrm{m} \text { n } \\
& \mathrm{P}=\left(\frac{\mathrm{mx}_{2}+\mathrm{nx}_{1}}{\mathrm{~m}+1}, \frac{\mathrm{my} \mathrm{y}_{2}+\mathrm{ny} \mathrm{y}_{1}}{\mathrm{~m}+1}\right) \\
& P=\left(\frac{k(6)+1(-2)}{k+1}, \frac{k(3)+1(-5)}{k+1}\right) \\
& P=\left(\frac{6 k-2}{k+1}, \frac{3 k-5}{k+1}\right)
\end{aligned}
$$

But $P$ lies on the line $x-3 y=0$

$$
\begin{aligned}
& \frac{6 k-2}{k+1}-3\left(\frac{3 k-5}{k+1}\right)=0 \\
& \frac{(6 k-2)-3(3 k-5)}{k+1}=0 \\
& 6 k-2-9 k+15=0
\end{aligned}
$$

$-3 \mathrm{k}+13=0$
$-3 \mathrm{k}=-13$

$$
\mathrm{k}=\frac{13}{3}
$$

$\therefore$ Ratio is $13: 3$
$\Rightarrow$ Coordinates of P are $\left(\frac{9}{2}, \frac{3}{2}\right)$

## Section E

36. Case Study - 1

Volume of a Bird Cage. A company makes rectangular shaped bird cages with height b inches and square bottoms. The volume of these cages is given by the function $V=b^{3}-6 b^{2}+9 b$.
(i) Find an expression for the length of each side of the square bottom.
(ii) Use the function to find the volume of a cage with a height of 18 inches.
(iii) Use the remainder theorem to find the volume of a cage with a height of 15 inches.
(iv) Verify the result of (iii) using functions.

## Solution:

(i)

$$
\begin{aligned}
V & =b^{3}-6 b^{2}+9 b \\
& =b\left(b^{2}-6 b+9\right) \\
& =b\left[b^{2}-3 b-3 b+9\right] \\
& =b(b-3)(b-3)
\end{aligned}
$$

$\Rightarrow \mathrm{b}$ is height
(b-3) is the length of each side of square bottom.
(ii) If $\mathrm{b}=18$ inches (height of cage)

$$
\begin{aligned}
\text { Volume of cage } & =b(b-3)(b-3) \\
& =18(18-3)(18-3) \\
& =18 \times 15 \times 15 \\
& =4050(\text { inch })^{2}
\end{aligned}
$$

(iii) Here we have to find $V$ (15) using the remainder theorem.
(ii) We divide $b^{3}-6 b^{2}+9 b$ by $b-15$. Remainder will be value of $V$ (15).

Remainder is 2160

$$
V(15)=2160
$$

(iv) $V(15)=15(15-3)(15-3)$

$$
\text { (1v) } \quad \begin{aligned}
& =15 \times 12 \times 12 \\
& =2160(\mathrm{inch})^{2}
\end{aligned}
$$

$$
\begin{array}{r}
\frac{b^{2}+9 b+144}{}+-15 b^{3}-6 b^{2}+9 b \\
\frac{b^{3}-15 b^{2}}{9 b^{2}+9 b} \\
\frac{9 b^{2}-135 b}{144 b} \\
\frac{144 b-2160}{2160}
\end{array}
$$

## 37. Case Study - 2

Dipesh bought 3 notebooks and 2 pens for Rs. 80. His friend Ramesh said that price of each notebook could be Rs. 25. Then three notebooks would cost Rs.75, the two pens would cost Rs. 5 and each pen could be for Rs. 2.50.Another friend Amar felt that Rs. 2.50 for one pen was too little. It should be at least Rs. 16. Then the price of each notebook would also be Rs.16. Aditya also bought the same types of notebooks and pens as Dipesh. He paid 110 for 4 notebooks and 3 pens.
(i) Whether the estimation of Ramesh and Amar is applicable for Aditya?
(ii) Let the cost of one notebook be $x$ and that of pen be $y$. Which of the following set describe the given problem?
(iii) What is the exact cost of the notebook?
(iv) What is the exact cost of the pen? What is the total cost if they purchase the same type of 15 notebooks and 12 pens?

## Solution:

(i) Let cost of one notebook be $x$ and pen be $y$

Then cost of 3 notebooks and 2 pens $=3 x+2 y$
Again cost of 4 notebooks and 3 pens $=4 x+3 y$
So by the given condition
$3 x+2 y=80$ $\qquad$
$4 x+3 y=110$
Which is set of equations to describe the given problem?
Hence the set describe the given problem is
$3 x+2 y=80$ and $4 x+3 y=110$
Now we solve from $x$ and $y$
Multiplying Equation (1) by 3 and equation (2) by 2 we get
$9 x+6 y=240$
$8 x+6 y=220$
On subtraction we get $x=20$
From Equation (1) we get $y=10$
Hence cost of one notebook is 20 and that of pen be 10
Ramesh said that price of each notebook could be Rs. 25
So Ramesh's estimation is wrong
Amar felt that Rs. 2.50 for one pen was too little. It should be at least Rs. 16
So Amar's estimation is wrong
(ii) Whether the estimation of Ramesh and Amar is applicable for Lokesh Ramesh's estimation is wrong but Amar's estimation is also wrong. Solving Equation (1) \& Equation (2)
we get $x=20 \& y=10$
( iii ) The exact cost of the notebook $=$ Rs 20
(iv) The exact cost of the pen = Rs 10

The cost of 15 notebooks $=$ Rs $(15 \times 20)$

$$
=\text { Rs } 300
$$

The cost of 12 pens $=$ Rs $(12 \times 10)$

$$
=\text { Rs } 120
$$

Hence total cost $=$ Rs $(300+120)$
$=$ Rs 420

## 38. Case Study - 3

Conical Tank : The advantages of cone bottom tanks are found in nearly every industry, especially where getting every last drop from the tank is important. This type of tank has excellent geometry for draining, especially with high solids content slurries as these cone tanks provide a better full-drain solution. The conical tank eliminates many of the problems that flat base tanks have as the base of the tank is sloped towards the centre giving the greatest possible full-drain system in vertical tank design.

Rajesh has been given the task of designing a conical bottom tank for his client. Height of conical part is equal to its radius. Length of cylindrical part is the 3 times of its radius. Tank is closed from top. The cross section of conical tank is given below.

(i) If radius of cylindrical pait is taken as 3 meter, what is the volume of above conical tank ?
(ii) What is the area of metal sheet used to make this conical tank? Assume that tank is covered from top.
(iii) What is the ratio of volume of cylindrical part to the volume of conical part?
(iv) The cost of metal sheet is Rs 2000 per square meter and fabrication cost is 1000 per square meter. What is the total cost of tank?

## Solution:

(i) Radius of the cylindrical part $=$ Radius of the conical part $=\mathrm{r}=3 \mathrm{~m}$

Height of the cylindrical part $=3 \mathrm{r}=3 \times 3=9 \mathrm{~m}$
Height of the conical part $=r=3 \mathrm{~m}$
$\therefore$ The volume of the conical bottomed tank

$$
\begin{aligned}
& =\text { Volume of cylinder }+ \text { Volume of cone } \\
& =\pi r^{2} \mathrm{~h}+\frac{1}{3} \pi \mathrm{r}^{2} \mathrm{~h} \\
& =\pi(3)^{2} \times 9+\frac{1}{3} \pi(3)^{2} \times 3 \\
& =81 \pi+9 \pi \\
& =90 \pi \mathrm{~m}^{3}
\end{aligned}
$$

(ii) Finding the area of metal sheet used to make this conical tank:

Radius, $\mathrm{r}=3 \mathrm{~m}$
$\therefore$ Slant height, $\mathrm{l}=\sqrt{\mathrm{r}^{2}+\mathrm{h}^{2}}$

$$
\begin{aligned}
& l=\sqrt{3^{2}+3^{2}} \\
& l=\sqrt{18} \\
& l=3 \sqrt{2} \mathrm{~m}
\end{aligned}
$$

$\therefore$ The area of the metal sheet used to make this conical tank is
$=[$ CSA of the cylindrical part $]+[$ Area of the top of the cylindrical part $]+[$ CSA of the conical part]
$=2 \pi r h+\pi r^{2}+\pi r l$
$=2 \times \pi \times 3 \times 9+\pi 3^{2}+\pi \times 3 \times 3 \sqrt{2}$
$=54 \pi+9 \pi+9 \sqrt{2} \pi$
$=63 \pi+9 \sqrt{2} \pi$
$=9 \pi(7+\sqrt{2}) \mathrm{m}^{2}$
(iii) Finding the ratio of the volume of the cylindrical part to the volume of the conical part:
$\therefore$ the ratio of the volume of the cylindrical part to the volume of the conical part,

$$
\begin{aligned}
& =\pi r^{2} h_{1}: \frac{1}{3} \pi r^{2} h_{2} \\
& =h_{1}: \frac{1}{3} h_{2} \\
& =9: \frac{1}{3} \times 3 \\
& =9: 1
\end{aligned}
$$

(iv) Finding the total cost of the tank:

The cost of the metal sheet is = Rs 2000 per square meter The fabrication cost is $=$ Rs. 1000 per square meter
$\therefore$ The total cost of the tank per meter square is $=$ Rs. $2000+$ Rs. $1000=$ Rs. 3000
$\therefore$ The total cost of the conical bottom tank is $=3000 \times 9 \pi(7+\sqrt{2})$

$$
=27000 \pi(7+\sqrt{2})
$$
